GoTwist™

Company

Established in 1987, GLASPRAY is a designer and manufacturer of dispensing packages for fragrance, skincare and cosmetic industries. Glaspray's product R&D strictly follows core values of the "R" guideline of Rethink, Reduce, Reuse and Recycle. We strive to innovate solutions that fulfill customer's requirements on sustainability. Today, our product line of dispensing packages is 100% refillable and/or reusable and this is to express our care and concern for the work we live in.

As an innovator in refillable packages, Glaspray's goal is to provide solutions to our partners to achieve their guidelines and standards of sustainability towards a true circular economy.

Value DNA

Originality

Thinking from new perspectives and applying intelligent engineering, Glaspray integrated different designs and mechanism, transforming ideas and concepts to products in unconventional ways.

Flexibility

Glaspray continues to create true multifunctional /cross over products in the market's ever changing trends by adapting alternative functions and applications in our product design. We offer a manufacturing process that facilitates different engineering requirements.

Simplicity

Less is more. Glaspray turns complex techniques and packaging structures into simple design language. We combine minimalism with refinement for your stylish consumers to strengthen your market differentiation.

Create Distinction

True differentiation requires revolution. Glaspray keeps on creating because the next idea could be the answer.

ISO 9001

BUREAU VERITAS
Certification

● Design

Cooperation with Italian designer, Glaspray fuses global perspectives from eastern and western to create inspirational ideas.

● Customization

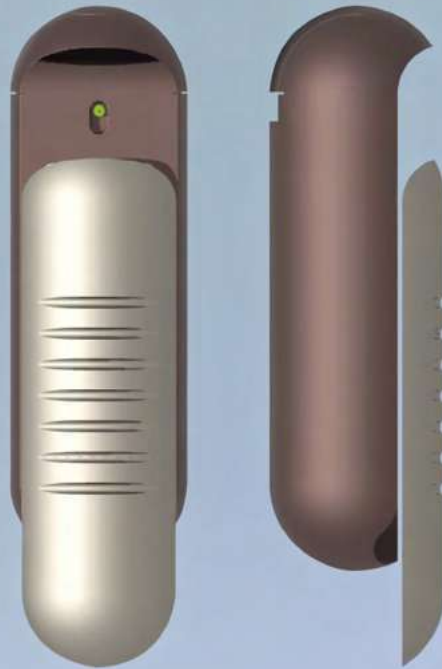

Uncompromising creators turn idea into creative solutions. Glaspray implements a seamless process that includes optimization of design and engineering, reduction of time-to-market and a network of resources. Our customization process creates new customer loyalty for your ideas.

● Engineering

A team of engineers and designers provides consistent and precise engineering services including structural design and rapid prototyping. Courtesy of latest 3D printing technology, we are able to reduce development lead-time and costs.

simple is better.
semplice è meglio.

Twist Up Airless

Glaspray's product development strategies focus on reusability due to increasing demand for a true sustainable packaging.

Our AIRLESS refill cartridge system, TUA (Twist Up Airless) is a patented system that carries balance between glamour and sustainability. Pure Path pump engine is used to provide precise delivery.

Our packaging design has compact features and so that they can be part of our on-the-go life style, being there when needed.

The airless refill cartridge system means less impact on the environment, reducing and reusing. In the full plastic TUA package, when the canister is reused for additional inner cartridges, consumption of plastic is reduced by 66% therefore leading to reductions of carbon footprint in all stages of production and transportation.

STEP 1

STEP 2

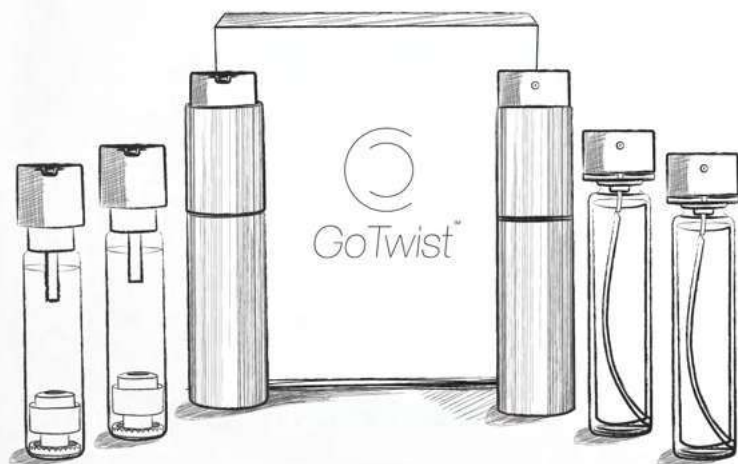

STEP 3

STEP 4

Cartridge Refill System

All Glaspray twist up dispensers utilize cartridge refill system. A system that is refined, easy-to-use, and innovative. The refill cartridge is easily replaced, and separated for recycling when equipped with a screw pump.

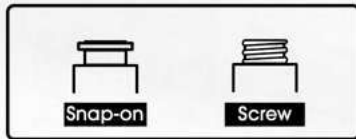

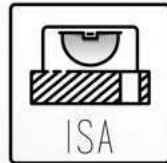

The cartridge refill system is a great way to create a full product line that's novel and attractive. The ability to design a mix and match line of products is extraordinary, based on any number of criteria. A firm might even use it to create a sample set. The possibilities are endless, as are the marketing approaches.

When the first cartridge runs out it may be replaced with a full cartridge. Advantages? Well, not having to purchase a new bottle means less packaging is used, and that means less impact on the environment - reducing and reusing is everyone's responsibility.

Pure Path metal-free

Cartridge Refill System

Airless pump cartridge utilizes pure path dispensing technology to achieve a metal-free path for all formulas. Twist Up Airless and cartridge refill system offers a luxurious packaging with flexibility and mobility, available in 15, 20 and 30ml.

The extremely small pump body, a super transparent dip tube and the very low height of the actuator make our "low profile" pumps the best solution for fragrance packaging that requires a very sophisticated, aesthetic look.

LP "Low Profile" pumps are available in various sizes for crimping and screw type neck bottles. Standard colors are shiny silver/gold. Custom colors are available with a set MOQ.

UPSIDE-DOWN

Glaspray's Upside-Down (USD) fine mist spray is designed for applications that require spray action when holding the bottle upside down. The unique design allows the formulation to be completely emptied in the upside down position.

Glaspray's USD module is a complementary technology to our GMD fine mist spray series, and is available with all standard threads including our trigger spray.

360° Trigger Spray

Glaspray's mini trigger spray, TG-002 is equipped with our precise and durable GMD series pump module and structure has a free turning handle that makes alignment with bottle and printing an easy job. And it's ergonomic design provides easy spray action.

Glaspray's mini trigger spray is popular among hair and personal care applications and it's available in 24/410 thread and USD (Upside-Down) spray module.
